

Scotch Whisky Condenser Refurbishments

Excel Engineering the valve & heat exchanger division of JBD Tritec were commissioned by Diageo, to undertake the refurbishment of a number of Scotch whisky condensers.

The condensers were shipped to our factory based in Whitburn where the condensers were fully reconditioned, which included repair to the vessel shells and replacement of the copper tube bundles.

110 copper tubes were removed and replaced in each condenser.

The project was completed within a tight time window and the condensers were returned to their respective distilleries without delay.
